

CBC-Companies

We had Hartmann on site to conduct classes on EJBs using WebLogic and advanced Java Programming.

I attended one of the classes and found it very useful. The feedback from the other session was positive overall. It was not just a “follow along the PowerPoint” presentation; there were several labs and the instructors were very engaging.

I’m certain I can come up with a few negatives if I think about it, but nothing significant comes to mind.

The most important component of our experience with Hartmann was they tailored the agenda (as much as they could) toward our specific needs. We had them eliminate 3 or 4 sections of their standard course and replace them with something suited to our current efforts. I don’t recall exactly what the topics were, but they were related to WebLogic. This let us apply the training right away.

I have had good and bad experience with training. This was one of the best largely due to Hartmann’s work up front to tailor the sessions to our needs.

I hope this helps.

Regards,

Andy

Dear Robin,

We used Hartmann Software for some C++ training and some Framework/Design work, and will definitely use them again in the future as our needs require. The instructor provided to us was Andreas Tabor. Andreas did a very good job of presenting the material to the group and proved to be very knowledgeable with the material. He did a great job of assessing the knowledge within the group and adjusting the material so that we would get the most out of the class. Although his examples were not specific to our industry, they did a good job of illustrating the points he was teaching and it was fairly easy to expand on them and apply them to our own specific needs.

Overall we had a very positive experience with Andreas and therefore with Hartmann Software.

Take Care,
Chris

Duke Energy

I think it worked out very well and I was happy with the class. At this point, I am not sure if other areas are looking for any training needs. If someone enquires about it, I will forward the information to them.

Andreas, Derrf,

I have to leave now – prior commitment.

Thanks for the class - it was a good session.

Regards,

Ravi

Union Pacific Railroad

The instructor was very interesting and we had relevant discussion beyond the subject matter expertise. It was a lot of material to cover in 2 days and we didn't make it to the last chapter on security which is something I need to know for a project so will cover on my own. The first morning was at a good pace. The last day went too quick as I thought the material was more complex (simply due to subject matter). Overall, I thought Andreas was one of the best, if not the best, technical instructor I've seen. Besides me being overwhelmed the last day, it was a joy.

The instructor, Andreas Taber, was excellent! The class lecture was taught very well by him. The company gave good demonstrations throughout the curriculum of the course. In my opinion I would recommend that consulting company again to teach.

I believe that this instructor was one of the better ones when it came to explaining things.
